

CLAIMS

1. Motor vehicle (1) with a movable hatch (H1) that encloses a rear window (H4) in at least one position, wherein the rear window (H4) can be separately moved from its closed position relative to regions (H2; H3) that surround it and into a released position, characterized by the fact that the rear window (H4) can be lowered in its released position in a region of the automobile body (6) some distance from the hatch (H1).

2. Motor vehicle (1) in accordance with Claim 1, characterized by the fact that the rear window (H4) is held on the vehicle (1) in each position and phase of movement.

3. Motor vehicle (1) in accordance with Claim 1 or Claim 2, characterized by the fact that the rear window (H4) can be lowered when the hatch (H1) is in its open position.

4. Motor vehicle (1) in accordance with any of Claims 1 to 3, characterized by the fact that in the open position, the rear window (H4) can be lowered at least mostly below a lateral belt line (7) of the automobile body (6).

5. Motor vehicle (1) in accordance with any of Claims 1 to 4, characterized by the fact that in its released position, the rear window (H4) is held at least approximately vertically.

6. Motor vehicle (1) in accordance with any of Claims 1 to 5, characterized by the fact that the rear window (H4) can be supported and moved by linkage parts (H9; H10) arranged laterally in the automobile body (6).

7. Motor vehicle (1) in accordance with any of Claims 1 to 6, characterized by the fact that to allow adjustment of the released position of the rear window (H4) at least in certain regions, the rear window (H4) can be moved into the automobile body (6) by means of lateral guide rails (H14; H15).

8. Motor vehicle (1) in accordance with any of Claims 1 to 7, characterized by the fact that the hatch (H1) has an essentially U-shaped design outside the rear window (H4) and, in its closed position, encloses (H2; H3) the rear window (H4) at least partially at the lateral edges (H13) and the lower edge (H12) of the rear window (H4).

9. Motor vehicle (1) in accordance with any of Claims 1 to 8, characterized by the fact that in the closed position of the rear window (H4), at least one additional movable panel section (P1; P2) extends from the upper and forward edge (H5) (in the direction of vehicle travel) of the rear window (H4) and can also be lowered into the automobile body (6).

10. Motor vehicle (1) in accordance with Claim 9, characterized by the fact that the rear window (H4) and the other panel section(s) (P1; P2) lie parallel to one another in the open position.

11. Movable hatch (H1) for a motor vehicle (1) in accordance with any of Claims 1 to 10.
